

The CE-IP project aims to develop new training solutions that can help match the expected expansion of green job opportunities with skilled workers, to promote a shift towards a more sustainable economy in the textile sector.

Target group:

- Self-employed, unemployed and low-skilled workers from other productive sectors.
- Trainers of continuous training systems that provide courses for adults related to new employment opportunities.

The Consortium:

Project results:

- IO1.** Training guide on circular economy management strategies for microenterprises.
- IO2.** Multimedia training resources with a 360° web base on good practices and innovative ways of extending the useful life of textile products.
- IO3.** E-learning course for trainers on circular economy.

We have just implemented the Training Guide on circular economy management strategies for micro-enterprises.

Throughout this, various aspects related to the project are discussed. On the one hand, a trio of introductions to both the Circular Economy, micro-enterprises and the textile sector. In addition, complete information related to Circular Business Models and the opportunities that the Circular Economy offers in the business world is offered.

Another aspect included in the Guide is also important: a summary of Good Practices in relation to the Circular Economy.

It is the best way to fully understand the Circular Economy scenario: with practical examples of what various companies in the countries belonging to the project do. In each of the examples, a short description of the business model is offered, how they make this productive model effective and a link to their website to be able to expand the information or even to be able to contact the different companies to ask them questions or aspects of your business:

The Guide is offered online, with totally free access, accessing a website in the form of a very visual and intuitive information panel (dashboard) in the various languages of the project partners, that is: English, German, Slovenian, Spanish, Greek and Italian.

In this way, anyone interested in learning about the Circular Economy can consult the dashboard and become familiar with this production model and expand information through links to videos and other pages related to this content..

A roadmap is also included which, as pre-established questions and answers, becomes a summary of the steps to follow to start the Circular Economy process from scratch in a company.
